

Sisense Fusion Embed

Differentiate your products with embedded, AI-powered intelligence.

The Sisense API-first analytics platform helps organizations deliver robust embedded analytics fast with powerful code-free and AI-driven analytics, with the flexibility to customize, manage and scale the solution with code-first workflows built on an enterprise-grade, cloud-native foundation.

Deliver intelligence, not just data, with cutting-edge analytics seamlessly embedded into your products so your customers will not know where analytics ends and their workflow starts.

Infuse intelligence with deeply embedded analytics.

DRIVE CUSTOMER SATISFACTION AND PRODUCT STICKINESS

Embed intelligence exactly where your customers need it with the exact experience you want to provide

- Fully white-label and customize the look and feel with the UI for speed and REST APIs for scale
- Embed anywhere with JavaScript based Embed SDK and Sisense.JS libraries or iFrames directly
- Customize and extend analytics with JavaScript APIs and Add-On Framework
- Build custom analytic apps with actions with low-code Sisense BloX and Actions SDK

Fuse with any ecosystem and scale securely.

BUILD FUTURE-PROOF PRODUCTS THAT ARE SECURE

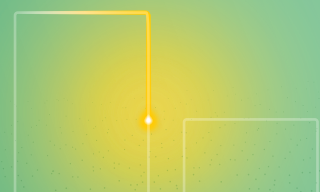

Ensure maximum flexibility to support growth and change

- Deploy on any cloud, on-premises or Sisense Cloud
- Architect as a single or multi-tenant deployment
- Ensure end-to-end governance with multi-level security and versatile SSO integrations
- Monitor with Grafana and Kubernetes dashboards, Sisense Monitor and Usage Analytics

SCALE WITHOUT COMPROMISING PERFORMANCE OR AGILITY

Scale programmatically as your users and use cases grow

- Automate integration and deployment workflows with an extensive suite of REST APIs
- Scale on-demand with cloud-native architecture
- Manage deployments with Kubernetes and DevOps
- Optimize efficiencies with deep partnerships with cloud providers and third-party tools

Connect to any data, your way, and scale as you grow.

MANAGE YOUR DATA AT SCALE

Deliver real-time insights with live data or cache data for rapid prototyping and minimized query costs

- Connect to any data on any cloud or on-premises
- Analyze directly on existing data warehouses
- Cache data with Sisense’s high-performance database
- Automate data workflows with end-to-end APIs

Analyze and explore data, with or without code.

STAY AHEAD OF RAPID INNOVATION CYCLES

Get to market fast without a heavy engineering lift enabling customer self-service

- Build rapidly with code-free and AI-driven analytics
- Minimize pre-aggregations with a unique semantic data layer decoupled from the visualization layer
- Create re-usable data models with drag-and-drop, AI powered data prep
- Democratize data with dynamic data exploration, analysis-on-the-fly and interactive analytics

DELIVER DEEPER INSIGHTS

Leverage code-first capabilities for custom and unique needs

- Dive deeper into the data with SQL, R and Python
- Optimize analytic queries with materialized views
- Develop custom analytic queries without affecting operational data structures

Augment with predictive analytics, AI and machine learning.

STAND OUT IN HIGHLY COMPETITIVE MARKETS

Deliver innovative user experiences that go beyond standard analytics

- Embed natural languages querying for customers to self-serve historical and predictive analytics anywhere
- Augment analytics with AI/ML based trends, forecasts, explanations, proactive alerts, exploration and more
