Pre-Planning Portal

Planning submissions are at an all-time high, inundating local authorities with planning-related information requests. Simultaneously, the demand for online self-service continues to grow, with citizens expecting modern, accessible tools to meet their needs.

Pre-planning is a crucial first step in the planning permission process; however, these requests have traditionally been handled manually by planners—consuming valuable time and resources.

At DataBuilders, we have collaborated closely with planning departments to develop an automated Pre-Planning Portal. Our modern, web-based solution empowers citizens through self-service, enabling them to select their area of interest and receive a comprehensive Pre-Planning report. Our solution enhances operational efficiency and significantly reduces the administrative burden on planners and council staff by automating repetitive tasks and providing self-service capabilities.

Solution Highlights:

- Cross-Platform Compatibility
- Intuitive, Map-Centric Design
- Automated, Self-Service Portal

Core Advantages:

- Citizen Empowerment
- Improved Customer Service
- Measurable Time & Cost Savings for Councils
